

Era: Modern Day

A virus dubbed Obitus Senilis by the WHO has infected planet Earth itself. The origin of the virus is unknown. The virus has caused people all around the world to turn into zombies. A brave professor, Dr. Oliver Nikolson, nicknamed Ollie, has found a cure for the virus but the injection was swatted away by the WHO as the process to administer the cure is too risky. The cure must be injected into the Earth's core in order for it to take effect. The path to the core is dangerous and filled with zombified humans, some of which used to be coworkers of his. Along the way, Ollie has the option of stealthily moving past said zombies or opting to slay them. It's a solo operation, full of surprises and potentially death. However, Ollie feels the risk is worth it as he has no family left. The end goal is quite simple but there may be something or someone standing in the way.
